01 Introduction

SLV.one is a growing platform connecting traditional markets and businesses with cutting-edge technology and new generation cryptocurrency, smart contracts and the large spectrum of tools the Ethereum platform has to offer. It is our aim to exponentially increase Ethereum integration into small and medium businesses.

We are a firm dedicated to promoting, offering, and integrating the Ethereum platform to any individual wanting to make tangible improvement to his or her business structure by entering a whole new level of digitalization where lofty goals are within reach.

Link Investment Solutions

For more than 5,000 years gold and silver have been used as true money, and for centuries their value have not been damaged at any point. Many people believe that cryptocurrency, a newcomer to the international market, could become or compete as a store of value with physical metals. SLV.one improves the features that make silver or gold a respected “store of value”, which is why we decided to merge the best of two worlds and bring an innovative physical silver-backed crypto asset. With SLV.one, the stability and reputation silver has held through the centuries are combined with the security, speed and profitability a cryptocurrency asset can offer.

As SLV.one is the link between cryptocurrency and the international silver market, it is projected to grow into a large and decentralized platform for digital silver certificates trading.

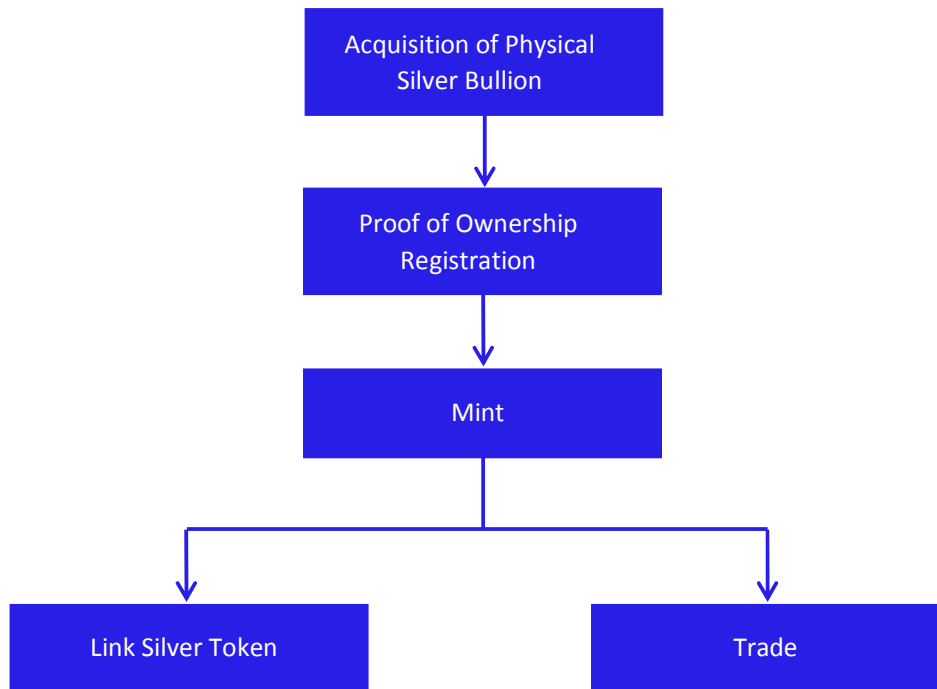

The platform offers a digital Token backed with real .999 physical silver to add a whole new level of security to modern cryptocurrency trading. Physical silver will be acquired, transported, and stored with the highest levels of safety available.

02 Link Silver Token (\$SLR)

SLR Silver Token runs inside the Ethereum platform as a standard ERC20 token.

Link plans to offer several benefits by integrating physical silver into Link trading. The first is to reduce extreme downward volatility related to crypto assets, while the second is the promise to be the first choice among traditional investors for making low-risk investments while simultaneously trying the Ethereum protocol.

The mechanism Link Silver will use to perform its operations is described below:

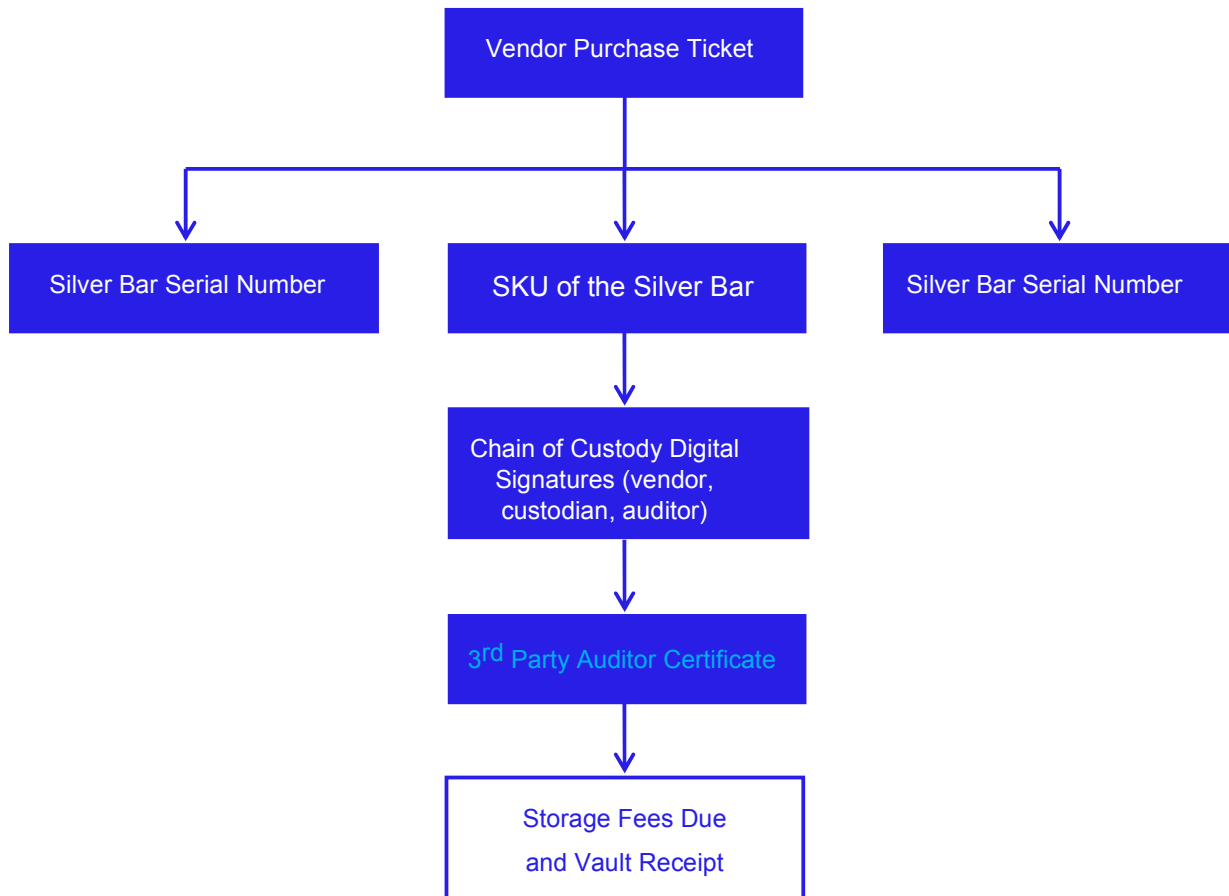

1. Acquisition of Physical Silver Bullion

Link acquires 0.999 fine certified silver when a new buy order is triggered and paid by a user inside our platform. The silver is acquired from the lowest spot price + available in markets with major silver industries such as:

Australia
China
Peru
Russia
Mexico
Chile

2. Proof of Ownership Registration

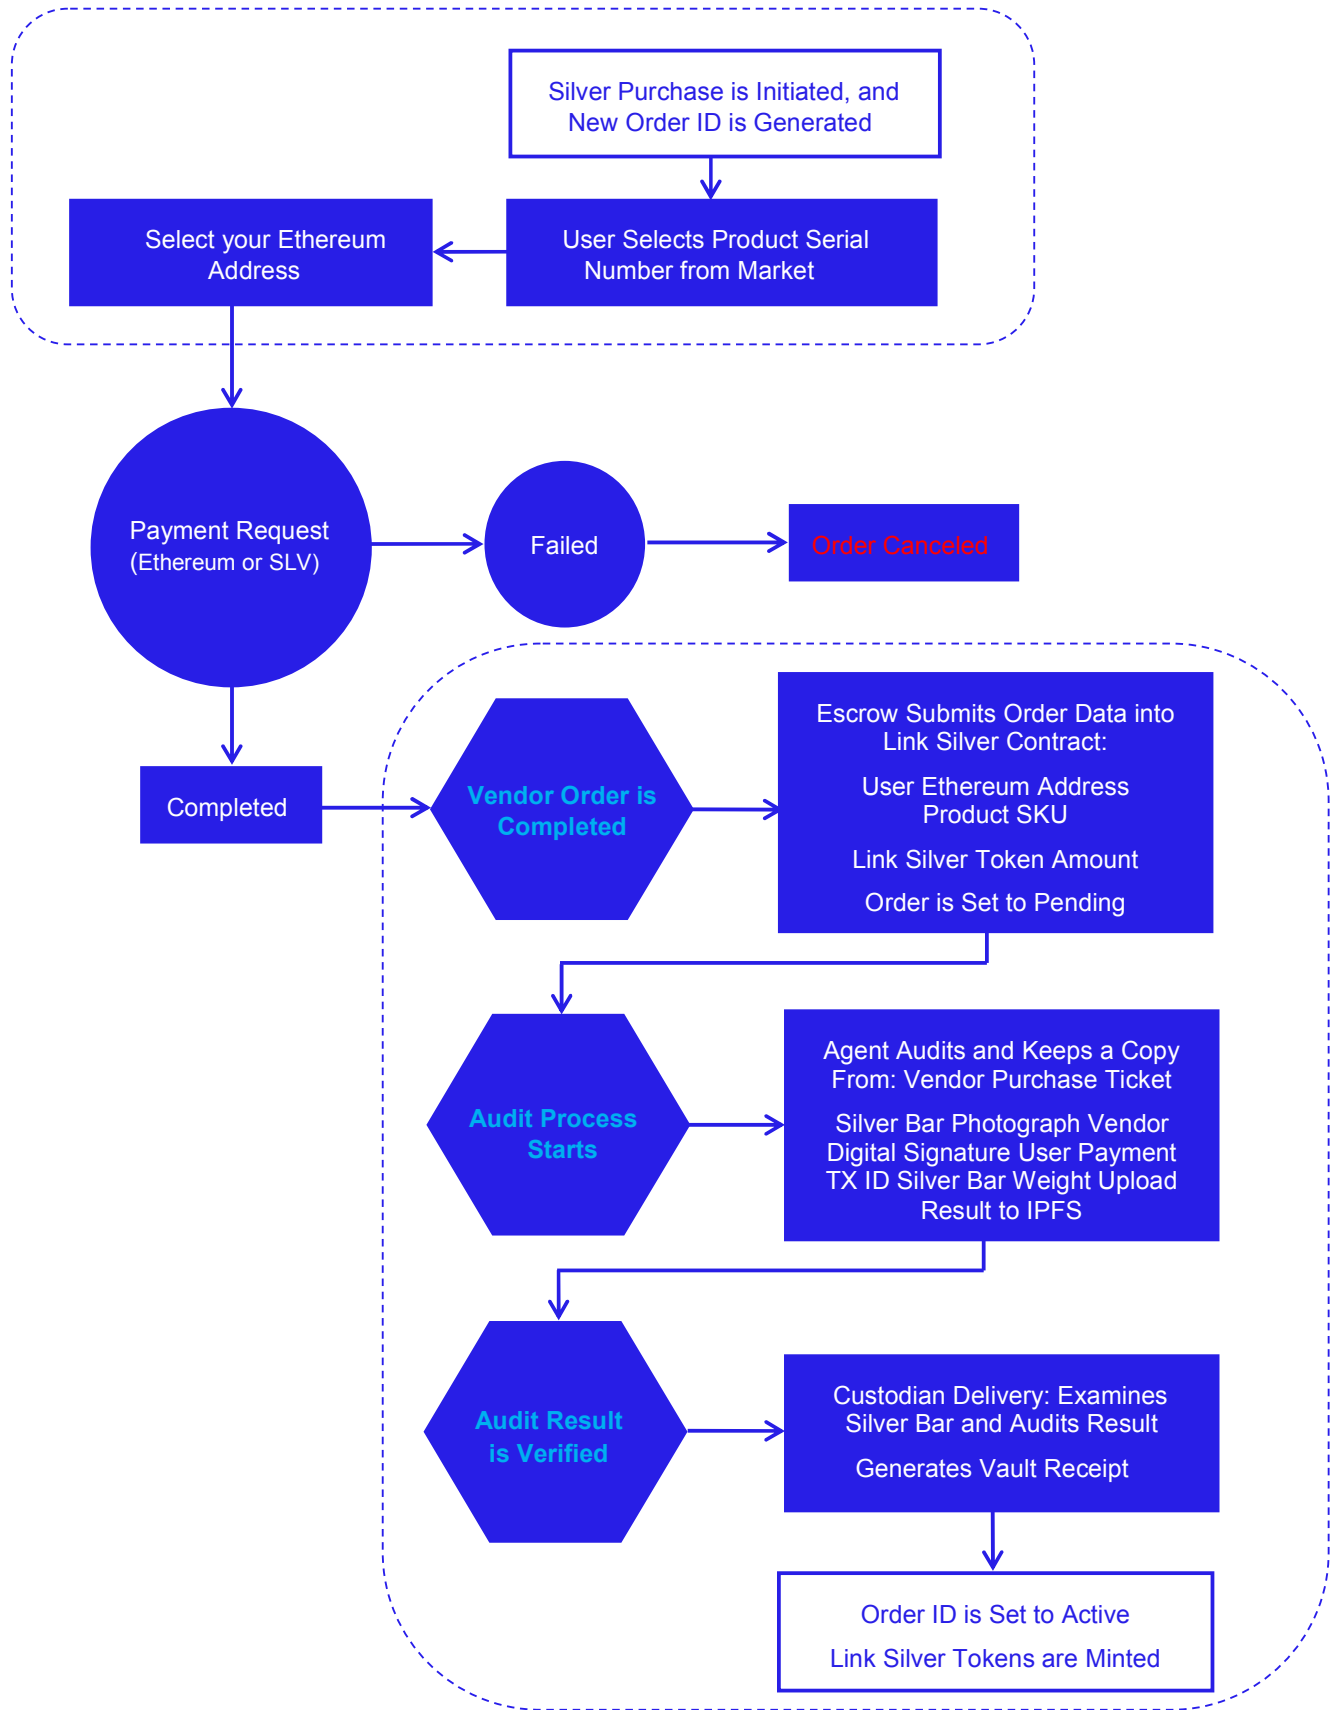

3. Mint

SLR Silver Tokens are minted via a Minter Smart Contract, an Ethereum ERC20 Token issuance automation. Each \$SLR Silver Token represents 1g of silver and is divisible to 0.001g. For every Card that is sent to the Minter Smart Contract, \$SLR Silver tokens will be issued in return. For instance, a 100g Silver Card sent to the Minter Smart Contract returns 100 \$SLR Silver tokens to the user.

4. Trade

SLR Silver Token is now fully tradable and secured into the Ethereum blockchain. Link Silver tokens are held in an Ethereum wallet. At this point, a Silver SLR Token can be sold, held, or redeemed at any point by the user. The exchange platform will charge a 0.19% fee on every \$SLR trade; this fee will entirely go towards Link Token holders. All trades are final and are registered on the Ethereum blockchain.

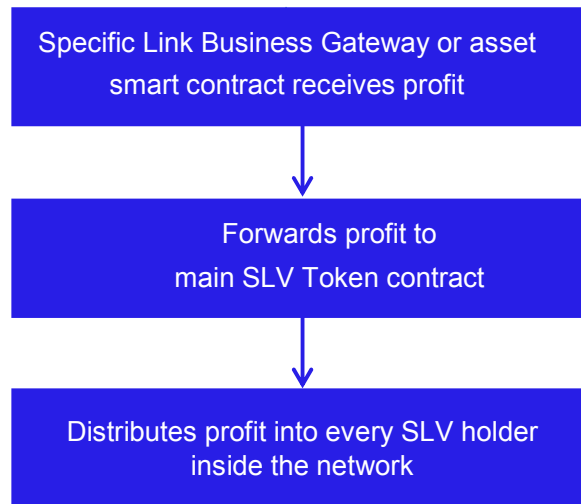

5. Link Silver Token Registration

03 SLV Platform Token (\$SLV)

SLV Platform Token Features are listed below:

The main ERC20 Token from the Link platform functions as a share, and a proportional part of Link Platform profits is periodically distributed to SLV Token Holders via their smart contract addresses, which means every SLV Token holder holds a small part of the SLV Platform as a whole. The procedure is as illustrated here:

Physical assets like Link Silver \$SLR (0.19%) trading fee is charged to main Link Token Smart Contract.

The SLV Token is initially backed by our first asset: 0.999 Fine Silver. SLV Token Holders will receive the privilege to redeem part of their holdings for physical Link Silver or Link Silver Tokens once three months have passed after the Initial Coin Offering is complete.

04 Growth Plan

Link Silver redemption centers are planned in several locations around the world, so that any investor wanting to effect his or her redemption Token rights can do so without crossing national borders.

Link Platform is aiming to acquire more physical assets of this kind to ensure a wide range of options to the end-investor.

Link will approach industry leaders in order to integrate new assets to our platform with an initial high liquidity and to take advantage of the assessment skills and experience these established vendors/traders have.

The above is projected with the sole goal of accelerating precious metal tokenization, commodities, and fiat currencies into the blockchain.

05 Business Gateway

Are you an individual or entrepreneur looking to take advantage of blockchain and the Ethereum platform? Whether an investor or simply an individual with a great idea related to the use of Ethereum, the platform can support almost anyone. SLV.one is a new business space where people connect with each other sharing the same goals: updating to a new business structure using the blockchain as its core or experimenting with smart contract programming in order to develop new technologies.

The intermediate and third step is to make SLV platform a necessity on a daily basis for investors, users, and entrepreneurs interested in blockchain technology solutions.

Assessment contracts with individuals and corporations wanting to revolutionize their business structure as a whole via Ethereum smart contracts.

These Link – 3rd party contracts are publicly disclosed and profit is distributed among SLV Token, prioritizing SLV Token Holders.

06 Conclusion

Link Firm seeks to build a better world and offer new solutions, where finances are run by artificial intelligence, where anyone from any country can improve his or her life by taking advantage of automated smart contracts. From health care and accounting to public administration, Link will have a solution for your industry.
